FIRE-PROOF BUILDINGS.—PORTER'S PATENT.—By an improved mode of applying Cast-metal Iron to the construction of Floors, Roofs, &c., for which Patents have recently been granted to John Henderson Porter, Buildings of every class can be rendered Fire-proof at a very trifling increase of cost, and without any increase of weight.—While from the absence of cast-iron and timber greater security is obtained, to point of strength, than by the ordinary method of construction.

PORTER'S PATENT BEAMS and GIRDERS of CONSOLIDATED IRON, on account of their remarkable stiffness, are particularly suitable for buildings and bridges: they are 20 per cent. lighter, and 30 per cent. cheaper, than other wrought-iron beams of equal strength.—Manufactory, Iron Building and Roofing Works, Southwark; Offices, 2, Adelaide place, London-bridge, City.

THE SECURITY from FIRE which results from the adoption of the system of constructing FLOORS, CEILINGS, and ROOFS, invented and patented by Mr. FOX, is attained WITHOUT any INCREASE of COST. In this system the ordinary timber joists are superseded, and light iron cases in which the requisite degree of strength is developed by cast-iron arches are substituted: these, together with concrete (or any of those combustible materials, forming a perfectly fire-proof foundation, capable of receiving a finished surface of wood, composition, stone, slate, or tile, &c. This plan of insuring possesses much greater durability than the ordinary method; for it is effectually protected from the attacks of Dry-rot, and the numerous annoyances resulting from vermin and insects of all kinds is entirely prevented.

The advantages of this system, whether in Dwelling-houses, Warehouses, Manufactories, or other buildings, is secured with economy immediate, in the reductions of the first cost; and prospective, in the absence of charges for repairs. Every advantage attained by the ordinary methods of fire-proof building is effectually secured at about one half the cost, while the internal thrust, so objectionable in the Iron girder and brick arch system, is entirely avoided. The great superiority of this plan has been proved by many years of trial, and every information obtained on application to Messrs. FOX and BARRETT, Leicester Chambers, 46, Leicester-square.

IRON SHUTTERS.—The PATENT CONVEX REVOLVING IRON SHUTTERS are cheaper, twelve times stronger, work easier, occupy full one-third, and full up to one-third less room than any other shutters made. Harmonic Quincey, Patentee.
